

SETWISE SUITE FOR WINDOWS

Your whole collection. Ready for air.

One app to look after a huge MP3 collection, DJ from it with a built-in player, plan and run radio shows (even from rules you type in plain English), stream to your station, and control it all from a phone or tablet, with a safety net under everything it does.

ON AIR

The big light that tells you the stream is live, and shouts if it drops.

60,000+

files scanned in
one library test

0

music files deleted
by the app, by
design: it only
moves and
archives

1,450+

automated tests
behind it

2 + 2

decks in the built-
in DJ player, in
eight looks

Phone

and tablet remote,
plus its own
Android app

MADE FOR

People who live in their music

Built by a working radio presenter who got tired of juggling six tools. If your music is your job or your passion, it is for you.

Radio presenters

Plan the show from your own library, get the running order timed to the second, and run it live from one screen.

Station engineers and managers

Keep the library clean, stop repeats across shows, stream and record from the same desk, and know at once if the stream drops.

Mobile and club DJs

DJ straight from your library with the built-in player, or sync clean playlists to VirtualDJ. Mark tracks explicit for the kids disco, and never lose a track to a moved folder.

Serious collectors

Tens of thousands of MP3s, one tidy structure, duplicates handled by your rules, and a list of what you still need to get.

YOUR LIBRARY

Know exactly what you have, and keep it tidy

Point it at your music folder and it builds a searchable library that stays in step with your disk. Everything it fixes is previewed first, and files are only ever moved, never deleted.

Fast scanning

Reads tags, lengths and bitrates for tens of thousands of files, and spots which folders changed so a rescan takes minutes, not hours.

Duplicates, your way

Finds exact and same-song duplicates and keeps the best copy by your rule: quality, size, age or folder. Duplicates are archived, never deleted, with a report of every move.

Incoming filing

Drop new downloads in one folder; they are checked, gain-levelled if you wish, and filed into **A-Z \ Letter \ Artist \ Year - Album** automatically.

Tidy Folders

Finds files sitting in the wrong artist folder, corrects odd names such as "1980 ~ Artist", and moves them home. Exclude any folder you never want touched.

Relocate Tracks New

Moved, renamed or accidentally shifted something? It finds the missing tracks elsewhere on your drives and reconnects them, keeping your playlists and play history intact.

Health checks

Finds damaged MP3s, missing files and files changed outside the app, and tells you if a drive is simply unplugged instead of crying "everything is missing".

TAGS AND DATA

Clean, consistent, trustworthy

Smart Fixes

One-click clean-ups with a preview: fix casing (with your exceptions like AC/DC and UB40), split "Artist - Title", strip junk text, key and BPM prefixes and promo spam, and rename files to match.

Artists and albums

Merge misspelt artists and the app remembers your choice. The Album Checker compares each artist with MusicBrainz and shows which albums you are missing.

Live, cover and explicit marks New

Detects live and cover versions and flags explicit songs (written into the file's comment too), so your shows and playlists can include or exclude them.

Years and genres

Fills missing years from reliable sources, tidies genres, and lets you filter shows by decade and style.

FINDING MUSIC

Ask for it in plain words

A real search language

Search by artist, year ranges, genre, length, quality, live or cover, even **not played for a year**. Save any search as a smart playlist that updates itself.

Track Matcher

Paste a list or point at a Google Sheet or Spotify playlist: it matches every song to your library, picks the best copy, and builds the playlist.

Tracks to get New

Songs you do not own go on a shopping list with a report you can print. When a scan finds them, they are ticked off automatically with the date.

Statistics

Your collection in numbers, laid out in big clear panels: by decade, quality, genre, artist, live and cover, plus what you actually play and what you never do.

SETWISE DJ

A DJ player built into your library

Your whole collection is already in it, searched, tagged and rated. Load a track and play: no export, no second program, no waiting for a folder to re-scan.

Decks that do the job

Two full decks and two small ones, with waveforms and a beat grid you can snap to. Tempo with key lock and Sync, hot cues, loops and beat loops, a sweep filter and echo, headphone cue on a second sound card, and ducking under the microphone.

Eight looks, day and night

New

Standard, Club, Turntable, Vinyl, Denon-style, Pioneer-style, VirtualDJ-style and a compact Mixxx-style look with black jog discs. Show or hide the mixer, waveforms and library with one button each, and switch between Day Mode and Night Mode.

Autocue and Auto-mix

Fill the queue and let it run: each track starts on the other deck as the last one ends, or Auto-mix picks a track that mixes well and matches its tempo. Played tracks show a tick, and one click removes them all.

What next? New

The player suggests what to play after the current track: it mixes in key, tempo and energy, and it learns from what *you* have played after it before. Every suggestion says why. It gets better the more you play.

Your library, at hand

Word-start search across everything, a folder tree with your genres, years, artists, smartlists and Spotify playlists, **Favourites**, **Crates** for each event, colour labels, star ratings, tags and notes on every track, and cover thumbnails.

One row per song New

When you own several versions of a song (the original, a remaster, a radio edit, a live take) the list shows one row with the best version on top and an arrow to fold out the rest. You choose which one is the main version.

Kids mode and explicit warnings New

Mark tracks explicit in the library or the player. A red warning shows on the deck, loading one asks you first, and Kids mode keeps them out of Auto-mix and out of the suggestions.

Jingles, ducking, loudness

Banks of jingle pads with their own levels and a proof-of-play log, a loudness chip that warns when a track is too hot, level matching, output meters with a clip lamp, and the mix going to the stream and the recording.

MIDI controllers

Maps for the Numark Party Mix II and the Denon Prime 4 Plus are included, and MIDI learn lets you give any control on any controller to any action.

Check before the show New

One button lists what to put right before you go on: the sound device you chose is connected, the microphone is set for ducking, no queued file is missing, no explicit track is queued in Kids mode.

Gigs and venues

A profile per venue with do-not-play rules and request handling, a record-your-set button, show notes and a licensing report of every song played.

Built not to crash the show

Every extra is fenced off: if one fails it is logged and the deck keeps playing. The queue is saved as it changes, so a restart brings it straight back.

SHOWS

From a blank page to a timed running order in a minute

Describe your show once: the slots, the features, the rules. Setwise Suite builds it from your library, times it from the real track lengths and hands you a run sheet.

1

Make the show

Fixed slots, same-year picks, a long player, a spotlight track, a three-track theme, no repeat artists.

2

Check it

News lock times, both hours fit, warnings for the same artist twice running or too many live tracks in a row.

3

Add the words

On This Day, birthdays and a fact per track (Claude optional, with or without an API key).

4

Confirm

Saved to play history, sent to VirtualDJ in order, with a clear list of anything to play from Spotify.

RUN SHEET (ILLUSTRATION)

07:01	Queen – Radio Ga Ga
07:15	* Year pick 1 – Devo – Whip It
07:19	* Year pick 2 – Blondie – Atomic
07:23	The Cars – Just What I Needed
07:40	* Morning Long Player – Layla

Tracks 8 and 9 are by the same artist back to back.

Illustration of the layout. Your run sheet uses your own tracks.

A language check you set per station (relaxed for rock, strict for family days) flags songs for you to decide on. Classics are never banned: the final call is always yours.

Every confirmed show goes into play history, so the next show avoids the artists you played in the last fortnight. See last played and play counts on every track.

SHOWS · NEW

Just tell it what the show should be

Type your rules in plain English and Setwise builds the show from your library. It reads each sentence back to you, tells you plainly about any it did not understand, and never guesses. Save the rules and run them again for a fresh show every time.

RULES IN PLAIN ENGLISH (ILLUSTRATION)

Create me a 2 hour show for The Breakfast Show on Gold Radio UK.

All decades, all genres.

No repeat artists per show.

No repeat artists per week or 3 shows.

Slots 4, 5, 6 are the Feature "What the duck year is it?" Three songs from the same year.

Before the halfway mark add a long track over 6 mins long.

Always add at least one NWOCR artist.

Illustration of the idea. Your rules use your own words and your own library.

It knows how a station thinks

Lengths, features built round one year or decade, a long track before the halfway mark, genres you must include or avoid, decade quotas, and no artist repeated in the show, this week or in the last few shows.

Preview, re-roll, send on

See every position with the reason it was picked, re-roll any single track, then open the result in the Show Builder with the real timings. The show is saved to the play history so the next one avoids repeats.

ON THE DAY

A live-show screen that lives inside your library

The Radio show dashboard opens in its own window, so it can sit on a second screen while the whole library stays at your fingertips. Drag, resize and hide panels until it looks the way you work, then save the arrangement under a name.

On-air light New

A big red light when you are live, amber while connecting, dark when off. If the stream drops, it flashes, beeps and counts the seconds off air until you are back.

Microphone light New

Red and glowing when the mic is open. Press M, or let it follow fader 1 on your RODECaster so it is always right.

Free key facts for every track

New

Click a song and the best facts from Wikipedia appear: the year, the chart peak, who wrote it. One click copies them to your notes. No AI cost. Optionally ask Claude to turn them into spoken lines.

Bring your own playlist

Open a playlist from Music Manager or any tool (CSV, M3U or a plain list). Every song is matched to your library; missing ones are marked **use Spotify**.

Now playing, sent for you

New

Tick a song Played and its title goes to your station's player, so listeners see what they hear.

Your screen, your way New

Every panel moves and resizes freely. Save arrangements such as **Breakfast** or **Rock Radio** and switch between them in a click, reset to the original with a warning, and flip the whole app between light and dark.

Listener requests, live New

Requests from your website form, your email inbox, your Telegram bot or pasted from a text or WhatsApp appear on the dashboard as they arrive. Mark them read or played, clear them (they are kept in history), check you have the song, and add it to the show in one click.

A tablet in the studio New

Put the requests on a tablet beside the mixer: big Read, Played and Clear buttons, the on-air and mic lights and a clock, PIN protected and kept on your own network. Or have every new request pinged to your phone on Telegram.

Everything else you need

Clock to the top of the hour, studio timer, weather, news feed, show notes, task list and a 12-pad jingle wall on keys 1 to 9, 0, - and =.

PHONE AND TABLET

Control it from across the room

A web page served by the app

Open a page on any phone or tablet on the same network: both decks, the jingle pads, the clock, the on-air and mic lights, listener requests with Read, Played and Clear, and your playlists. Nothing to host, protected by a PIN.

Setwise Remote for Android

New

A small Android app that finds your studio PC on the Wi-Fi by itself, keeps the PIN, keeps the screen on and can tell you when a new listener request arrives. Works in landscape so you can see both decks.

Venue and audience screens

Guests scan a QR code to see what is playing, request songs and send shout-outs. A big-screen page for a TV, and you approve what shows from your phone.

BROADCAST · NEW

Record and stream without leaving the app

A built-in studio recorder and Icecast streamer, with meters, gain and the safety features a live broadcast needs.

STUDIO RECORDER (ILLUSTRATION)

ON AIR

L

R

Illustration of the meters and light.

Icecast streaming at 320k MP3, with a server list for each station (for example a rock and a gold station), each with its own encrypted password.

If the connection drops it reconnects every few seconds, warns you with a flashing light and a beep, and tells you when you are back and how long you were gone.

Record the same audio to a dated MP3 file, with a warning if the signal goes silent and a safe save if the input disappears.

DJ SOFTWARE

VirtualDJ, sorted

Playlist sync

Your playlists appear in VirtualDJ as proper folders, with a preview of what will change, a backup of VirtualDJ's files first, and a dry run if you want to look before anything is written.

Show running order New

Confirm a show and the position of every song is written into VirtualDJ's User 1 field. Sort by it and your show is in order, whatever the track numbers say. Old shows are tidied away.

Import from VirtualDJ

Bring VirtualDJ's own folders in as a read-only copy, so your library and your decks agree.

PEACE OF MIND

Built to be trusted with a collection you cannot replace

Dry run first

Every change can be previewed with a report, before anything is written.

Music files are never deleted

Duplicates and damaged files are moved to an archive, with a record of every move.

Backed up before it changes

The database is backed up automatically before risky operations, with copies to a NAS and a check when you close.

Secrets stay secret

Passwords and keys are encrypted for your Windows user and never written to a backup or a settings file.

Nothing goes out unasked

Going live, sending a title or contacting a service always follows your click, never

A start-up password

Lock the app with a password asked for at every start. It is stored only as a salted

a surprise.

You decide

Language flags, matches and suggestions advise; nothing is banned or changed without you.

Stays up to date

A proper installer and an update checker, so a new version is one click away.

hash inside an encrypted file, never in plain text.

Easy to start

A set-up wizard walks a new user through the music folder (with a look inside that changes nothing), helper folders, sound and look.

COMING SOON

Where it is heading

Setwise Suite grows every week. These are planned and in the build queue; the order can change as people use it and ask for things.

More DJ player Coming soon

- Lyrics window for a second screen or TV, so the room can sing along
- Four full decks, with EQ and the wide waveform on C and D
- Continuous sync that keeps decks locked, and a beat grid you drag into place
- Automatic intro and outro detection
- Hear a deck in the headphones while it is also live
- A sampler row, per-channel level meters and a cover preview in the compact look
- More effects, and skins you can make yourself
- Video and karaoke

A player that learns

Coming soon

- Suggestions that learn separately for each kind of show: kids disco, club, radio, wedding
- Skips count: tracks you always cut short stop being suggested
- Tracks you own but never play that fit your style
- Gaps in a set's energy found and filled
- An empty Show Builder slot filled with a good match
- Ideas from outside your library, straight onto your shopping list

Smarter show rules

Coming soon

- "A jingle every four songs" and ident placement
- "Start with something upbeat, end with a ballad"
- Energy, tempo and key rules
- Save the built show straight out as a playlist file
- A rules editor for fine-tuning what it understood
- An optional AI reader for looser wording
- Smart crates that fill themselves from a rule, and drag-and-drop onto a crate

Library

Coming soon

- Engine DJ sync
- Keep your music in the cloud, as an option
- Number a Various album's tracks as it is filed
- Genres suggested from MusicBrainz as well as your own library
- Choose which copy keeps a merged track's cues and grids
- A real trial scan inside the set-up wizard, and picking up where you left off

Phone, tablet and venue

Coming soon

- Accept or reject listener requests from the tablet, with a reason the listener can see
- Android: now playing on the lock screen, a jingle pad bar, a home-screen widget
- Remote EQ, effects, waveform and library tree on the phone
- Shout-outs read aloud by a synthetic voice, polls and likes, push notifications
- Your own branding on the big screen, smarter auto-approve, auto-clear at the end of a show
- A listener page for your station

Broadcast, checks and editions

Coming soon

- The pre-show check also tests your jingles, the tablet connection and the database
- Voice links that fade the music under them
- PPL / PRS layout for the licensing report
- A "now in section X" marker following the clock
- Stream-delay monitor and more microphones
- Setwise Library, Setwise DJ and Setwise Broadcaster as separate editions for people who only need one

See it with your own music

Setwise Suite runs on Windows against your own collection. Ask Telos Software for a walk-through.

Features marked New are built and being tried out on real shows and equipment; this brochure describes what the app is built to do. Features marked Coming soon are planned and not yet available, and may change. Names of other products (VirtualDJ, Icecast, Spotify, RODECaster, Wikipedia, MusicBrainz, Claude) belong to their owners and are used only to say what Setwise Suite works with. Screens shown are illustrations.
